

Manpreet Singh — Senior React Native Engineer

9+ Years Experience | React Native • React.js • Next.js | Banking, Fintech & AI Applications

Portfolio: <https://manpreet-portfolio-ruby.vercel.app/>

Professional Summary

Senior React Native Engineer with 9+ years of hands-on experience in designing, developing, and maintaining large-scale mobile applications. Strong expertise in banking and fintech domains, having worked on secure applications used by millions of users. Proven ability to modernize legacy React Native codebases, improve application stability, optimize performance, and deliver high-quality production releases. Experienced in collaborating with backend, product, and QA teams to deliver scalable and user-centric solutions.

Core Technical Skills

Mobile: React Native, Expo, Android, iOS

Web: React.js, Next.js

Backend: Node.js (Basic)

State & Data: Redux, TanStack Query, REST APIs

Languages: TypeScript, JavaScript

Quality & Performance: Jest, Unit Testing, Performance Optimization

Architecture: Modular & scalable component-based architecture

Key Projects & Experience

IDFC First Bank — Mobile Banking Application

Worked on a large-scale digital banking app offering account management, fund transfers, bill payments, and credit card services. Designed and implemented an in-app dispute and fraudulent transaction reporting flow, enabling users to raise issues directly from the app. Automated backend issue tracking through APIs, significantly reducing manual customer support efforts and operational costs. Ensured adherence to banking security standards, compliance requirements, and best practices.

Tonik Bank — Digital Neobank

Played a key role in upgrading the React Native version across the application. Updated and refactored custom native libraries to align with enhanced security requirements. Investigated and resolved complex bugs and crashes, resulting in a stable and reliable production release while preserving existing business flows.

Key Projects & Experience (Continued)

Ferns N Petals UAE — E-commerce & Gifting App

Contributed to building and enhancing an e-commerce application for the UAE market. Implemented country-specific ordering flows, multi-currency support with real-time conversion, and shipping address management. Developed gift selection, quantity handling, and final price calculations including shipping. Integrated third-party services for payments and logistics to ensure a seamless checkout experience.

HelloBible — AI-powered Bible & Devotional App

Worked on AI-driven features enabling users to chat with an AI assistant for scripture-related queries. Integrated advanced text-to-speech functionality to convert AI responses into natural-sounding audio. Focused on optimizing audio playback performance and ensuring a smooth user experience across devices.

TopMusic — Music Streaming Application

Improved overall application stability by fixing critical production bugs and crashes. Optimized rendering and data-fetching logic to enhance performance and reduce latency. Implemented updated UI/UX designs to improve usability and engagement for end users.

Key Achievements

- Delivered and maintained mobile applications used by millions of users globally.
- Reduced operational and support costs by automating customer service workflows.
- Successfully modernized legacy React Native applications without disrupting existing users.
- Strong experience working on secure, compliance-driven fintech and banking applications.

Availability

Available for senior mobile engineering roles, long-term contracts, and consulting engagements.
